

COS 301 – Reroute | Things to complete

- SRS document

SECTION 1 | Introduction

- ✓ Background – fine
- ✓ Purpose – fine
- ✓ Scope – I think this may need altering (not sure) | J
- ✓ Definitions, Acronyms etc – I think we may need to add some more (check here) | J, T
- ✓ References – The numbering seems off. The same as previous point (please check) | D
- ✓ Overview – I think it's still fine (can still check this) | J
- ✓ [Just a note, Jocelyn please check the places in section one where you mentioned things about it using the phone app. Please change them where needed] | J

SECTION 2 | Overall Description

- ✓ Product Perspective – some of the functionality may change here, given what is required of us as a group. (will look more into this before proceeding) | D
- ✓ In addition to the previous point, the numbering seems off. Please check this) | D
- ✓ Product functions – fine
- ✓ User characteristics – fine
- ✓ Constraints – I think Tim can take this one, given his absence prior to this | T
- ✓ Assumptions and Dependencies | All of us, any ideas?

SECTION 3 | Specific Requirements

- ✓ Software Interfaces (please check, whoever did this one) | Whoever did this one
- ✓ Functional Requirements – fine, but check the ML stuff if we still need it | H
- ✓ Non – functional requirements – I think it's fine, but please just review it | H
- ✓ Performance Requirements – I can't recall who did this one, but should be reviewed (I think it was me tho, lol)
- ✓ Use Case Prioritization – I think the ordering is messed up, can Daniel (or Tim) fix it? | D/T
- ✓ Important + Nice to haves – please review | H, J & T
- ✓ Other Requirements – Quality Requirements – not sure who wants to take this one
- ✓ Technologies – I think Heinrich did this one, but we can all add them in | ALL
- ✓ Design constraints – Undone | E/T can take it up
- ✓ Software System Attributes - please review | E

- Use Case Diagrams – need to discuss these
- Report (for Emilio) - Eunice
- Testing Databases + comparing those we have on ground – H, J (with help from the rest)
- Scope (redefine?)

So, the things we need to have explicitly (as we go along):

1. Requirements specification and design document
2. Test plan and test reports
3. Implementation and code quality
4. User manual
5. Demo
6. Team page

7. Individual git contribution
8. Participation in team activities
9. Participation in surveys and reviews
10. Personal profile pages

FEW MORE THINGS:

- In addition, Tim said some stuff about new/additional Use Cases, please fill us in on those.
- Overall spell check of the doc will be done by Eunice
- Team page can be improved by any of us as we go along
- Trying to create a timeline, any ideas are welcome, but we could use Emilio's assistance on this
- Remember to update individual pages as necessary if not already done (GIT, LinkedIn etc)
- We can have a meeting as to what the user manual can contain, but I rate Jocelyn can head that, given he would know a bit more than us what would be needed.
- Jocelyn and Heinrich can make *brief* reports based on the testing they would have made on the DBs, so we can know which we can choose.
- I emailed Mr. Mostert for test data, hopefully we get it soon.

That's all for now, Cheers guys 😊
