

Team Conclusions:

**Client (Mr. Mostert) (31.07)**

- Zizo is fantastic – shrinks the data. Whatever you put in the data is small.
- Transactional data can't be put in memory
- Use a mix

**Non -functional requirement**

- Needs to run on average commercial computers

**Architectural designs + diagrams (19.07)**

- ~~— Client Server Architecture~~ Cloud-based
- Service Oriented Architecture
- Rest Architecture

**Architecture Constraints – Integration testing (09.08)**

- Architectural Patterns – take out client server architecture and put in cloud based
- Do a new diagram for cloud based architecture – Eunice
